Amendments to the Claims

A listing of the claims, with Claims 3, 4, 6-12, 14, 16, 17, 19, 20 and 22-24 as currently amended, is presented below.

1. (Original) A method for providing biomolecules on a metal oxide substrate comprising the steps of:
 - a) coating said substrate with a polymer by bringing said substrate into contact with a solution comprising said polymer such that the polymer in said solution is able to form a coating on a surface of said substrate,
 - b) depositing said biomolecules onto the substrate obtained in step a) by bringing said biomolecules into contact with said substrate, and
 - c) immobilizing said biomolecules onto the substrate obtained in step a) by covalently binding said biomolecules to said substrate by means of electromagnetic irradiation.
2. (Original) A method according to claim 1, wherein said polymer is substantially adsorptively bound on the metal oxide substrate.
3. (Currently Amended) A method according to claim 1 ~~or 2~~, wherein said polymer comprises multiple amide functional groups and/or multiple cationic functional groups.
4. (Currently Amended) A method according to ~~any of claims 1 to 3~~ claim 1, wherein said polymer is selected from the group comprising poly-aspartate, poly-glutamate, poly-cysteine, poly-serine, poly-methionine, poly-arginine, poly-histidine,

Appl. No. : U.S. National Stage of PCT/EP2004/003668
I.A. Filing Date : April 6, 2004

poly-tryptophane, poly-alanine, poly-lysine, poly-leucine, poly-isoleucine, poly-tyrosine, poly-valine, poly-glycine, poly-proline, poly-phenylalanine, poly-threonine, polymers of other natural and non-natural amino acids and derivatives and mixtures thereof.

5. (Original) A method according to claim 4 wherein said polymer is poly-L-lysine.

6. (Currently Amended) A method according to ~~any of claims 1 to 5~~ claim 1, wherein said metal oxide substrate is a porous metal oxide substrate.

7. (Currently Amended) A method according to ~~any of claims 1 to 6~~ claim 1, wherein said metal oxide substrate is a substrate having oriented through-going channels.

8. (Currently Amended) A method according to ~~any of claims 1 to 7~~ claim 1, wherein said metal oxide substrate is an aluminium oxide substrate.

9. (Currently Amended) A method according to ~~any of claims 1 to 8~~ claim 1, wherein the biomolecules are immobilized on the substrate in spots, thereby forming an array of spots.

10. (Currently Amended) A method according to ~~any of claims 1 to 9~~ claim 1, wherein said biomolecules comprise the same or different biomolecules.

Applicants : Ying Wu and Robby Ruijtenbeek
Appl. No. : U.S. National Stage of PCT/EP2004/003668
I.A. Filing Date : April 6, 2004

11. (Currently Amended) A method according to any of claims 1 to 10 claim 1, wherein said biomolecules are selected from the group comprising oligonucleotides, polynucleotides, ribonucleotides, proteins, antibodies, antigens, peptides, oligo or poly saccharides, receptors, haptens, ligands, ~~antibodies, antigens, peptides, oligo or poly saccharides, receptors, haptens and ligands,~~ drugs, toxins and liposomes.

12. (Currently Amended) A metal oxide substrate obtainable according to the method of any of claims 1 to 11 claim 1, having a surface that is coated with a polymer, said substrate having biomolecules immobilised immobilized thereon, wherein said biomolecules are immobilised immobilized on said substrate by covalent binding by means of electromagnetic irradiation.

13. (Original) A metal oxide substrate according to claim 12, wherein said metal oxide substrate is a porous aluminium oxide substrate, having oriented through-going channels.

14. (Currently Amended) A metal oxide substrate, having a surface that is coated with a polymer, said substrate having biomolecules immobilised immobilized thereon, wherein said biomolecules are immobilised immobilized on said substrate by covalent binding by means of electromagnetic irradiation.

15. (Original) A metal oxide substrate according to claim 14, wherein said metal oxide substrate has a surface that is coated with a polypeptide, and preferably with poly-L-lysine.

Applicants : Ying Wu and Robby Ruijtenbeek
Appl. No. : U.S. National Stage of PCT/EP2004/003668
I.A. Filing Date : April 6, 2004

16. (Currently Amended) A metal oxide substrate according to claim 14 or 15, wherein said metal oxide substrate is a porous aluminium oxide substrate, having oriented through-going channels.

17. (Currently Amended) An aluminium oxide substrate, having a surface that is coated with a polymer, said substrate having biomolecules immobilised immobilized thereon, wherein said biomolecules are immobilised immobilized on said substrate by covalent binding by means of electromagnetic irradiation.

18. (Original) An aluminium oxide substrate according to claim 17, wherein said substrate has a surface that is coated with a polypeptide, and preferably with poly-L-lysine.

19. (Currently Amended) An aluminium oxide substrate according to claim 17 or 18, wherein said substrate is a porous aluminium oxide substrate having oriented through-going channels.

20. (Currently Amended) A kit or parts of a kit comprising a metal oxide substrate according to ~~any of claims 12 to 19~~ claim 12, further comprising a detection means for determining whether binding has occurred between biomolecules and an analyte.

21. (Original) A kit according to claim 20, wherein the detection means is a substance capable of binding to the analyte and being provided with a label.

Applicants : Ying Wu and Robby Ruijtenbeek
Appl. No. : U.S. National Stage of PCT/EP2004/003668
I.A. Filing Date : April 6, 2004

22. (Currently Amended) A kit according to claim 21, wherein the label is capable of inducing a ~~colour~~ color reaction and/or capable of bio-, chemi- or photoluminescence.

23. (Currently Amended) Method for performing probe-based assays, comprising the steps of:

contacting a sample comprising an analyte to a metal oxide substrate having biomolecules ~~immobilised~~ immobilized thereon according to ~~any of claims 12 to 19~~ claim 12;

incubating said sample with said substrate under conditions suitable for allowing binding of said analyte in said sample to said biomolecules ~~immobilised~~ immobilized on said substrate; and

detecting the binding of said analyte in said sample to said biomolecule ~~immobilised~~ immobilized on said substrate.

24. (Currently Amended) The Use of a metal oxide substrate according to ~~any of claims 12 to 19~~ claim 12, which is used for performing probe-based assays.
